

## **Reducing environmental impacts and renewable energy options on farms**

What is the future of farming? Do you want to help direct the future of farming and reduce its impact on the environment?

Agriculture has a significant impact on the environment and especially the climate. By studying this new and exciting three-week course you will explore the range of environmental impacts of agriculture. You will undertake a range of exciting farm practical farm visits to see what is being done to address these challenges. These visits will examine technologies that reduce environmental impact – including renewable energy and waste minimization technologies. This will be supplemented with classroom study and practical farm work experience. At the end of the course you will have developed working knowledge and essential skills of how farmers can practically reduce the environmental impact of their farms whilst also saving money.
