

GPS Course

Are you an agriculture student who is keen to learn more about modern crop production? This is a course for anyone who would like to develop skills in using GPS controlled tractors and machines in field crop production!

This course covers the basic principles of precision farming with examples of the use of data and data management. You will gain hands-on experience as well as an understanding of the future developments in precision farming.

You will learn about principles and technologies used in precision farming. You will develop your skills in using GPS technologies fitted to modern tractors and machines. You will also be introduced to the concepts of big data and data management related to precision farming. Through this, you'll become a more competent crop producer in a future of precision farming.
